

- Unique Dataset
- 20 Definitions of Family Firms
- 30 additional variables
 - Founder
 - Descendant
 - Family Member
 - Generation
 - Lone Founder
 - Year of Founding
 - Family Representative
 - CEO Hired
 - Year went public

NRG Metrics is happy to announce the launching of the fourth dataset, specifically designed for Family Firms. We respond to the need of our clients by adding a unique dataset that no other database offers. We provide to our customers a comprehensive database that can prove valuable for all researchers in the fields of Corporate Governance and Family Firms. Our target is to create the most complete Database for Corporate Governance researchers. This is the reason that every year we extend either the sample of companies or the categories and the variables provided.

How we select the definitions and the variables

-  1 We carefully review the existing literature
-  2 We select the most cited papers
-  3 We collect the definitions and the variables used
-  4 We build our dataset
