

NRG METRICS

fighting lack of information

our company

NRG Metrics is created in 2016 from a team of market professionals and academic researchers on the field of corporate governance.

By concentrating the experience and the knowledge from various types of academic backgrounds such as corporate finance, accounting, and management and of course corporate governance, we decided to create an independent corporate governance research firm.

Our goal is to provide accurate data about corporate governance. We strongly believe that the lack of information on corporate governance matters and especially on the field of ownership structure is an important disadvantage. Our goal is to fill this gap.

Our mission is to provide reliable data on corporate governance of listed companies around the world.

In order to build our database we have created an analysis team that collects data from annual reports, SEC filings, corporate governance reports etc

NRG METRICS
provides accurate data
about corporate governance

NRG Metrics Data Collection Procedure

NRG Metrics maintains only the highest degree of data quality. We implement a combination of quality control measures.

NRG Metrics employs expert analysts to manually enter, review, and cross check data with senior analysts, who often perform random audits. Customized software programs control all levels of data entry procedure for inconsistencies and errors.

Countries and Companies Sample

We use multiple criteria in order to select the countries and the companies for our sample.

1. First, we use the FTSE Country Classification (Developed, Advanced Emerging, Secondary Emerging, and Frontier). We cover all the large cap indexes from the Developed and Advanced Emerging countries.
2. Secondly, we cover 100 stock indexes from 46 countries. Our database is updated annually and extended to include all firms that have been added to the respective stock indexes during the year.
3. Thirdly, we have a special focus on European countries allowing us to cover also the middle and small cap indexes in selected European countries.
4. Fourthly, out of the secondary emerging countries group, we select four countries (India, Indonesia, Philippines and Russia, on which companies publish annual reports in English).

**CORPORATE
GOVERNANCE**

more than 60 variables
