

## database in numbers

Our **target** is to make NRG Metrics the new gold standard on Corporate Governance research. That is why every year we develop our database either by building new datasets or by adding new companies to our sample.

With a **15-year-track record**, more than 10.000 active listed companies from 60 different countries and 90.000 firm year observations, we provide the most comprehensive Corporate Governance Database.

## academia

Our company has a history of only six years in the field. So far, we have sold the Database to more than 80 universities (University of Oxford, New York University, University of South Carolina, HEC Montreal, University of Saint Gallen, University of North Carolina, ESCP, University of Liverpool, etc).

You may see an indicative list of [clients](#).

We believe that a large number of works are due to be published in the coming period. Until now we are aware of 13 published papers and 11 working papers.

UNIVERSITIES HAVE,  
ALREADY, BEEN OUR CLIENTS

PUBLISHED PAPERS

## extension of the database

Europe

*Estonia, Lithuania, Latvia, Malta, Slovakia, Iceland*

Rest of the World

*China, Egypt, United Arab Emirates, Saudi Arabia, Kuwait, Pakistan*

By adding **1.000 new companies** from **15 new countries**, we create the most dynamic international Corporate Governance Database.

The idea is to also work with countries that not only belong to Developed economies but also to Advanced Emerging and Secondary Emerging stock markets. By doing so, we will be able to compare the development of Corporate Governance in all over the world.

## future steps

**Voting Results.** Why? For 4 reasons: The new dataset is related with many existing datasets. 1) New directors are elected in AGMs, and we will be able to update immediately our database. 2) Shareholders vote for the Compensation Policy – Say on Pay. 3) Shareholders vote for the Ratification of the Auditors. 4) Shareholders finally vote on ESG issues – Say on Climate.

**Accounting Data.** Clients usually ask two questions: 1) 'How will I match your data with other datasets?' and 2) 'Have you got Performance data?' By adding this new dataset, we will be able to answer to both questions.

**Mergers & Acquisitions.** Every year almost a 5% of the companies included in our database are delisted. The main reasons are the following: Merger, Acquisition, Bankruptcy, Voluntary delisting, etc. As a result, we have already built a large sample of M&As that will be the basis for the new dataset.

We will be happy to hear your ideas and suggestions for the future extension of the database.
